

PMC SOFTWARE

Integrated Software Technology

PMC Software Inc. provides software solutions for manufacturing facility automation and materials optimization for the flat glass and window manufacturing industries. Founded in 1982, PMC Software Inc. offers the best products, years of experience, and a highly qualified staff. These strengths translate into a powerful reason for a partnership with PMC Software.

Industry Leader

PMC Software Inc. is the industry leader in computer-based products and services for the vertical markets of window manufacturing (fenestration) and flat-glass production. We specialize in the development of software products that integrate with whatever manufacturing equipment our customers are using. We are continuously adding to our list of successful interfaces based on our customers' needs.

Complete Range of Products

PMC Software provides the fullest range of Integrated Software Technology in the industry today, covering the entire spectrum of manufacturing and office operations for the glass and window industries. PMC Software's expertise encompasses the following:

- Glass, lineal and tempering bed optimization
- Real-time production manufacturing and remakes
- Materials and product tracking systems
- Man / machine (Numerical Control) interfaces

Knowledgeable Staff

The talent of PMC Software's staff has culminated in its MATE series of software products becoming the industry standard -- against which all others are judged. Our highly skilled programming staff provides our customers with the best cutting-edge product development and our technical support specialists provide superior installation, training and product support services.

We offer on-site training and complete support services for all our products, including remote system access to troubleshoot and solve any support questions you may have.

Customized Solutions

While much of our business revolves around "packaged" software, PMC Software's highly qualified staff makes it possible for us to customize a solution to better fit our customer's needs. Our experience has taught us that success depends upon a willingness to work with others. We freely welcome ideas from engineering, plant, and administrative personnel to develop the best solution.

In addition, we are authorized HP computer resellers, allowing us to provide your company with a total turnkey solution.

About PMC Software Inc.

Since its inception in 1982, PMC Software's focus was concentrated entirely on glass and window manufacturing -- its problems and our solutions -- providing glass optimization and machine control software for an expanding line of glass cutting equipment for a single machinery vendor.

In the early 1990's, in response to our customers' requests, PMC's focus broadened from a single machinery supplier to all domestic and international suppliers. We continue to add to this list of manufacturers as new machinery is put into the marketplace.

PMC Software's product line now provides the fullest range of Computer Integrated Manufacturing software, covering the entire spectrum of manufacturing and office operations, from order entry through shipping, for the glass and window industries.

Our company headquarters in Flemington, NJ provides expanded office, test lab, meeting, and training facilities. These facilities, coupled with our expanded resources, provide our customers the best cutting-edge product development and complete support services.

In September 2009 PMC Software became part of Friedman Corporation, developers of configuration based ERP solutions for the discrete, customer-driven manufacturer and distributor.
